07 Getting Sharper Output from AI

Keep this guide beside the four source files (Identity, Audience, Messaging, Brand) whenever you're briefing an AI tool or building an asset.

Introduction

What ClimatEnlighten is, and where it comes from.

Most climate education tries to hand you an answer. ClimatEnlighten starts with a question instead.

Climate content is everywhere, and most of it either buries you in facts or oversimplifies until it stops meaning anything. ClimatEnlighten doesn't try to convince you the planet's in trouble; you already know that part. It gives you room to actually think it through: to ask what you don't understand, connect it to your own life, and decide what you want to do next. We don't manufacture transformation. We just want to ignite a spark, and let you carry it from there.

It was built by two people who left steady corporate jobs to work on this full time. One spent a decade learning what actually gets a household to change its habits, one home at a time. The other studied why people with no connection to sustainability suddenly get curious enough to care. Between them, ClimatEnlighten stays practical without losing warmth, and hopeful without pretending the problem is smaller than it is.

Where WIOF fits in

ClimatEnlighten didn't start from nothing. It grew out of WIOF, World Is One Family, a community built around one question: *why should I care?* WIOF does the work of building that care. ClimatEnlighten picks up from there and asks the next question: *what do I do now?* Think of WIOF as the reason, and ClimatEnlighten as the way in.

The rest of this guide covers the practical part: logo, color, type, and the visual system, so all of that comes through consistently, wherever ClimatEnlighten shows up.

1

Logo Rules

Two logos: one a monogram, one a pictorial emblem. What each one means, which version to reach for, and where it can and can't sit.

ClimatEnlighten

Simplifying Climate Education

ClimatEnlighten

A monogram: one symbol built by combining letters, not an icon next to the words. It's a desktop globe rather than the usual open book, standing in for a classroom and for education. The globe's stand forms the "C." Behind it, the sun looms and rises, enlightening the earth, and its rays form the "E," reading "Climat" + "Enlighten" as one mark.

Below it sits the wordmark: the name alone, in Ocean Teal, in Aleo.

WIOF (World Is One Family)

The exact WIOF logo from six years ago: we didn't touch the mark, only its color. It used to run as a brown gradient with a grey wordmark, and while brown was the right color for what WIOF meant, carrying the whole mark in one shade left it feeling one-dimensional.

We kept it as Earthy Brown and added two more: Ocean Teal and Sunny Marigold, both to tie WIOF visually to ClimatEnlighten and because each shade now carries its own meaning, the same way it does across the rest of the system — Brown grounds, Teal carries the identity, Marigold brings the warmth. We also moved from a gradient to a flat fill. A gradient reads as soft and dimensional, closer to a rendered or glossy object than a mark, and works against the flat, graphic style the rest of the visual system is built on; flat color reads cleaner and more current, and keeps WIOF consistent with everything else built on this system.

The wordmark changed too: it's now set in Aleo, the same typeface as ClimatEnlighten's, with "WIOF" sitting above "World Is One Family" in a more balanced layout that narrows evenly on both sides beneath the initials.

Two terms worth knowing: the icon, and the full logo

Everything above, the symbol together with "ClimatEnlighten" or "WIOF" next to it, is the **full logo**. Strip the wordmark away and what's left, the symbol alone, is the **icon**. Both marks exist as standalone icons, for anywhere the full logo won't fit: a favicon, a social avatar, a watermark, a small stamp on a page.

Placed side by side, they're meant to read as one family, not two logos sharing a page: the whole point of this exercise was WIOF's six-year-old mark and ClimatEnlighten's new one, tuned to the same palette so they visibly belong together.

ClimatEnlighten

WIOF

The full logo – variations, and where each one goes

Reach for full color first. All-white and coloured rays both work on Ocean Teal or Earthy Brown: no fixed pairing, whichever contrasts better. All-black is for single-color print only.

Full color

Default. Use on ivory, white, or light backgrounds — reach for this first.

All-white

A clean silhouette for a solid Teal or Brown field, or a photo.

Coloured rays

For a solid Teal or Brown field when you want the marigold accent to stay visible, not go fully white.

All-brown, coloured rays

A quieter one-color-plus-accent option for ivory or light backgrounds. **Use sparingly**, not as a default, for the occasional piece that wants a different feel.

All-teal, coloured rays

Same idea, leading with the identity color instead of the base. **Use sparingly** for the same reason.

All-black

Single-color contexts only: black-and-white printing, stamps, anywhere color ink isn't an option.

Full color

Default. Use on ivory, white, or light backgrounds.

All-white

Works equally well on a solid Brown field, or a photo.

All-black

Single-color contexts only: black-and-white printing, stamps, anywhere color ink isn't an option.

Backgrounds — what's accepted, what's not

Same rule every time: whatever color in the logo matches the background disappears into it. Check below before placing either logo on a color field.

Marigold is never a background

Not a matter of which logo version: Marigold doesn't fill a background at all, for either logo, ever. It's an accent only: rays, an underline, the primary CTA button. Use Teal, Brown, or Ivory as the field, and let Marigold show up in a detail on top.

BACKGROUND

CE — DO

CE — DON'T

WIOF — DO

WIOF — DON'T

● Teal

● Brown

○ Ivory

On Teal and Brown, the logo's own colors overlap the field and vanish. That's the "don't" above. All-white is the safe default anywhere; all-black is for print only.

Typography

DISPLAY FONT

Aleo

Used for headlines and titles, and what's set in both logos' wordmarks. It's got character and is meant to be seen, not read at length.

BODY FONT

Noto Sans

Used for paragraphs, captions, and anything meant to be read comfortably in a block of text.

Never use the display font for a paragraph of text, and never use the body font for a headline; each one is doing a specific job. Don't substitute a different font either, even a similar-looking one.

Getting the fonts onto your system

Canva: already loaded. Pick them straight from the font menu.

PowerPoint: doesn't come with them. Before you open it, go to fonts.google.com, search "Aleo" and "Noto Sans," download and unzip each family, and install on your system. A one-time step; they'll show up in PowerPoint's font list after.

The system applied

Website (desktop and mobile), a social post, stationery, a roll-up banner, and a landscape brand illustration, all built from this system.

2

Quick Specs

Three colors carry ClimatEnlighten, each with one job, plus three neutrals that round it out. Together they should feel earthy, warm, and luminous, never sterile, never corporate.

PRIMARY

**Earthy
Brown**

#A6875D

*Grounds the
system.*

SECONDARY

Ocean Teal

#21999F

*Carries the
identity.*

ACCENT

**Sunny
Marigold**

#FFC26F

Small doses only.

BACKGROUND

Ivory

#FAF5EC

Room to breathe.

SURFACE

**Warm
White**

#FFCF66

*Lifts cards off the
page, not flat
white.*

INK

Near-black

#2B2420

*Body text, not
flat black.*

A hex code (like **#21999F**) is a color's precise address; it's what keeps Brown and Teal identical whether they're printed, on a screen, or pasted into a slide. Always copy the code above; never pick a close-enough color by eye.

Call-to-action color

Marigold is for the primary call-to-action button: the one main action on a page, like "Donate" or "Enroll." Teal and Brown already carry the rest of the design, so either would blend in where Marigold stands out.

Donate – Primary**Explore – Secondary**

Secondary, lower-emphasis actions like "Explore" can be Teal. Just keep it to one Marigold button per page. If everything is Marigold, nothing stands out.

Approved tints and shades

Need Brown, Teal, or Marigold a shade lighter or darker, for depth, contrast, or a background tint? Use one of the approved values below rather than

lightening or darkening by eye. A tint mixes toward white; a shade mixes toward black.

Brown	T40 CAB79E	T20 B89F7D	Base A6875D	S20 856C4A	S40 645138
Teal	T40 7AC2C5	T20 4DADB2	Base 21999F	S20 1A7A7F	S40 145C5F
Marigold	T40 FFDAA9	T20 FFCE8C	Base FFC26F	S20 CC9B59	S40 997443

Typography at a glance

Typography follows the same rule as the logos (see Section 1): Aleo for anything that needs to be seen, Noto Sans for anything meant to be read.

USE	FONT
Display (headlines, titles)	Aleo
Body (paragraphs, captions)	Noto Sans

A Few Terms Worth Knowing

Quick reference for words used throughout this guide. No prior design background assumed.

Monogram

Letters combined into a single symbol, instead of an icon next to the words. ClimatEnlighten's mark is one: the globe's stand doubles as the "C," the sun's rays as the "E."

Wordmark

Just the brand name, styled in its font; no icon or symbol attached.

Hex code

A six-character code (like `#21999F`) that names one exact color, a precise address, so it looks identical printed, on a screen, or in a slide.

Display font vs. body font

Two typefaces, two jobs. Display (Aleo) is for headlines, meant to be seen. Body (Noto Sans) is for anything meant to be read at length.

Tint and shade

A tint is a color mixed lighter, toward white; a shade is the same color mixed darker, toward black.

SVG

A graphic built from shapes, not pixels, so it stays sharp at any size. Used for logos, icons, and diagrams; not for photos or illustrations.

CTA (call-to-action)

The button or line asking someone to do one specific thing right now: "Enroll," "Register," "Download."

4

The Four Files, and What Each Is For

Four files, not four documents to dip into at random. They form a hierarchy, each built on the one before it.

Identity is the foundation everything else is built on. Upload to an AI tool in this order, bottom to top: it absorbs the foundation before the detail on top, instead of you correcting it step by step.

All four are markdown files, not PDFs or Word docs: plain text with light structure and nothing else for an AI to misread. Uploaded in order, it gets the full picture in one pass, less back-and-forth and better output on the first try.

IDENTITY.MD

Why ClimatEnlighten exists, and who's behind it

The founding idea, personality, values, what it refuses to be, the founders' backgrounds, and how it relates to WIOF.

AUDIENCE.MD

Who we're talking to

Five segments across two buyer types: **B2C** (Students, Parents, Working Professionals) and **B2B** (Corporates and Educational Institutions). Each with its own problem, trust signals, and needs.

MESSAGING.MD

How we speak to each audience, and where

Per segment: value proposition, channels, tone, what to lead with, what never to say. Plus how we tell a story, reuse content, and a Writing Standards checklist for every piece before it ships.

BRAND.MD

How the identity looks and sounds from the outside

Covers positioning, voice, the two logos and their meaning, the two typefaces, and the full Visual System: the rules for what ClimatEnlighten content should look like, across any format.

Before you write anything, check:

1. Which audience segment you're speaking to (Audience); a message for a parent and a message for a corporate L&D lead are not interchangeable.
2. That segment's tone, channel, and value proposition (Messaging).
3. Whether it says anything Identity's values or its list of what ClimatEnlighten is not would rule out.
4. Once a draft exists, run it against the Writing Standards checklist in Messaging before it ships.

5

Creating On-Brand Visuals

Pulled directly from the Visual System in the Brand file. Applies to any visual: a social graphic, a poster, a diagram, a slide illustration.

The core visual idea

ClimatEnlighten's visuals are about *something becoming clearer*. The guiding question for any visual: **what is becoming clearer here?**

This can come through light, revelation, overlap, contrast, direction, or scale. No literal light source required. Illumination is a behavior in the image, not an object you have to draw.

Start with the idea, then the subject, then the composition, then the visual language, never a logo motif or decorative pattern first.

The five-element vocabulary

A vocabulary to draw from when it strengthens an idea, not a checklist to tick off in every piece. A visual can use one, several, or none of these.

All linework (rays, terrain lines, waves, wind lines, circles, illustration outlines, icons) should share one bold, consistent stroke weight, matching the weight used in the ClimatEnlighten and WIOF logos. Never thin, delicate, sketch-like, or painterly.

Good practices

- ✓ Start with the idea, not a motif: decide what needs to become clearer before reaching for rays, a pattern, or an element.
- ✓ Keep a sun, if one appears, small, partial, and part of the scene, never the focal point or the default symbol for ClimatEnlighten.
- ✓ Use the five-element vocabulary only where it strengthens the idea, not to fill space or complete a set.
- ✓ Keep every line bold and clean, matching the logos, never thin, sketchy, or painterly.
- ✓ Keep people, animals, and plants flat and graphic, never photorealistic, and stay within the approved colors (Section 2).
- ✓ If removing an element wouldn't change what the visual means, leave it out.

The full, detailed Do/Don't list lives in the Visual System section of the Brand file; check there for edge cases.

The Test – before approving any visual, ask:

1. What is the idea? What is becoming clearer?
2. Does every graphic element support that idea?
3. If rays are present, what are they doing? If a sun is present, is it part of the scene rather than the brand's default motif?
4. If concentric circles are present, what do they represent?
5. Do the elemental forms interact meaningfully with the scene or each other?
6. Does the linework feel like it belongs to the ClimatEnlighten and WIOF logos?

If the answer is yes across the board, the visual belongs to the system.

6

Which AI Tool for Which Job

Practical guidance, not covered in the four files. Three tools, three jobs: using the wrong one is the most common way brand assets go off-track.

CLAUDE**For building things, and for simple graphics**

Builds a webpage, a PDF, a document, or any structured deliverable. It can also generate simple graphics directly as shape-based SVGs, so icons, diagrams, and charts stay sharp at any size.

Can't do: photos, or the flat, illustrated visuals the Visual System describes. Shape-based only, never painted.

CHATGPT**For image generation, and a first pass at a layout or concept**

The right tool for an illustrated visual, or for sketching a rough layout to see a direction before committing to it.

Can't do: reliable text or fonts inside an image; don't trust it to render "ClimatEnlighten" or anything in Aleo correctly. Treat its output as a concept only; the finished version always gets assembled in Canva or PowerPoint.

CANVA / PPT**For assembling the final asset**

Where a real, ready-to-use asset gets built: cards, decks, study material, standees, social posts, with the final logo, exact colors, and real typography. Canva has Aleo and Noto Sans loaded already; PowerPoint needs them installed first (Section 1).

Rule: nothing ships as final until it's passed through here.

Step-by-step: producing a real asset *(example – a poster or social post)*

- 1 Decide the message first, from the source files: who it's for (Audience), the tone (Messaging), whether it fits the values (Identity).
- 2 Need an illustration, or a rough layout to see a direction? Generate it in ChatGPT, following the Visual System (Section 5); upload the mockup board and the relevant logo file alongside it, so the AI has the actual look to reference, not just a text description of it.
- 3 Need a simple icon, chart, or diagram instead? Ask Claude to build it directly as an SVG.
- 4 Bring it into Canva for final execution: real text in Aleo and Noto Sans, exact hex codes, correct logo. This is what turns a concept into the finished asset.
- 5 Check it against the Writing Standards checklist in the Messaging file (its own Section 5) before it ships.

Getting Sharper Output from AI

What you upload changes the quality of what you get back. Three modes.

General or exploratory work – upload all four files

If you're brainstorming, exploring a new idea, or the work doesn't have one obvious audience yet, upload all four files (Identity, Audience, Messaging, Brand). Let the AI see the whole picture.

Audience-specific work – upload a trimmed set

Producing something for one audience (say, a LinkedIn post for parents)? Don't upload the entire Audience and Messaging files; they cover five segments, most of it irrelevant here. Instead:

- Copy just that segment's section from Audience (e.g., "Parents").
- Copy just that segment's section from Messaging (e.g., the "Parents" playbook).
- Upload those two excerpts alongside the full Identity and Brand files, since those two don't split by audience.

This keeps the AI focused on the one persona you're writing for, instead of five it doesn't need. The output comes back sharper.

Developing visuals – also upload the mockup board and logo files

The four files describe the Visual System in words. An AI generating an actual image needs to see it, not just read about it. Alongside whichever markdown files apply, upload the mockup board (Section 1) and the logo file(s) the piece calls for (Section 1, PNG or SVG). Without them, the AI is guessing at what ClimatEnlighten actually looks like.

Before anything ships

Run it against the Writing Standards checklist in the Messaging file (its own Section 5): AI-sounding patterns, overused words, filler to cut. Not optional. It's the difference between writing that sounds like ClimatEnlighten and writing that sounds like every other AI-assisted brand.

A brand system doesn't hand over every answer. It gives enough direction to make good calls faster, with less back-and-forth. Treat this guide the same way: a reference to return to, so ClimatEnlighten looks and sounds like itself no matter who's building the next piece, or which tool they used to do it.

BRAND IDENTITY DEVELOPED IN PARTNERSHIP WITH
