

WIOF Product Master Plan

From a Content Website to a Global Sustainability Movement

Prepared for: WIOF Core Team

Planning Horizon: 24 Months

Current Stack: Angular + Firebase + Firestore + Firebase Storage + Firebase Hosting + Admin CMS

Executive Summary

After reviewing the existing WIOF platform, admin dashboard, feature set, and frontend structure, I believe **the technical foundation is already strong.**

This roadmap deliberately **does not replace** what exists.

Instead, every phase **extends** your current application.

The goal is:

Build a platform that encourages millions of people to perform small positive actions every day and records the collective impact.

Everything below is designed around that vision.

Current Architecture

Current modules

Homepage

Blogs

Coffee Conversations

Courses

Breaking News

Calendar

Polls

Firm In Focus

Team Profiles

Newsletter

EQ Assessment

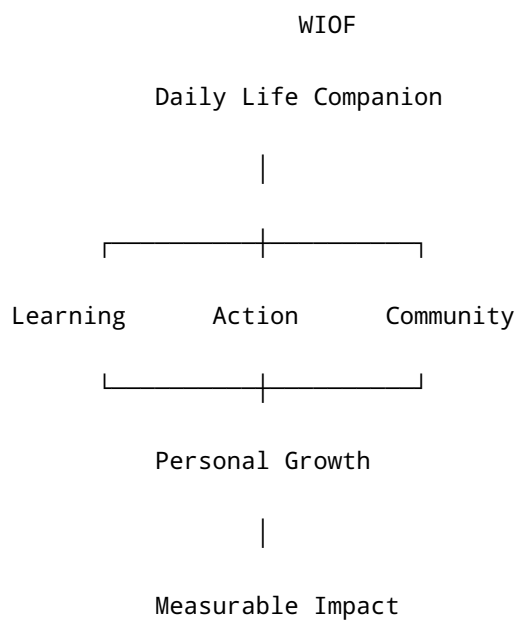

Admin Dashboard

These are all valuable.

The issue is **they are isolated.**

Our job is to connect them.

Future Architecture

PHASE 1

Foundation for User Accounts

Duration

3-4 Weeks

Priority

★★★★★

Goal

Allow visitors to become members.

Currently

Admin Login only.

Future

Admin Login

↓

Username + Password

Users

Continue with Google

No password management.

Firebase Authentication already supports this.

UI Changes

Explore Five Elements

Today's Focus Card

Automatically changes daily.

Example

Today's Element

Earth

One Blog

One Video

One Poll

One Challenge

No manual work.

Admin only chooses featured content.

PHASE 3

Five Elements Become Navigation

Duration

6 Weeks

Priority

★★★★★

Instead of

Blogs

Videos

Courses

Navigation becomes

Earth

Water

Air

Energy

Spirit

Each Element contains

Hero

Latest Articles

Featured Course

Videos

Polls

Events

NGO

Daily Challenge

Recommended Reading

Related Elements

Every content item receives

element

Earth

Water

Air

Energy

Spirit

Simply add a new Firestore field.

No restructuring required.

PHASE 4

One Small Step Engine

Duration

5 Weeks

Priority

★★★★★

This becomes WIOF's signature feature.

Admin Panel

New Module

Daily Actions

Admin creates

Title

Description

Element

Meditation Minutes

Even if values are estimated.

PHASE 6

Monthly Missions

Duration

4 Weeks

Admin creates

Mission

Description

Goal

Duration

Banner

Rewards

Examples

Plastic Free August

River September

Mindful October

Users Join

Track Progress

Mission Ends

Impact Published

PHASE 7

Environment Calendar 2.0

Current

Calendar shows events.

Future

Calendar becomes interactive.

Example

5 June

Environment Day

Read

Watch

Complete Action

Join Event

Everything linked.

PHASE 8

Community

Duration

8 Weeks

Communities

Schools

Companies

Cities

Families

Universities

Future

Pune Community

120 Members

542 Actions

200 Trees

4500 kg Carbon Saved

Users choose

Join Community

Firestore

communities

community_members

community_actions

PHASE 9

Impact Engine

Probably the most important backend feature.

Current

You store content.

Future

You store

Impact.

Every completed action generates

Impact Record

Example

Action

Walk Instead of Drive

Distance

2 km

Carbon Saved

350 grams

All values configurable.

Admin decides estimates.

Collections

impact_records

impact_summary

Global Dashboard

People

15,000

Actions

250,000

Water Saved

15M Litres

Carbon Saved

18 Tons

Trees

4,200

This becomes WIOF's identity.

PHASE 10

Content Recommendation

Every page

Instead of ending.

WHAT NOT TO BUILD YET

Avoid

- ✗ Chat system
- ✗ Social media clone
- ✗ Video hosting
- ✗ Complex LMS
- ✗ Marketplace
- ✗ Excessive gamification
- ✗ Hundreds of badges

These add complexity without significantly increasing impact at your current stage.

DEVELOPMENT ROADMAP

Quarter 1

- Google Sign-In
- User Profiles
- Personal Dashboard
- Saved Articles
- Five Element tagging
- Homepage refresh

Quarter 2

- One Small Step
- Daily streaks
- Monthly missions
- Notifications
- Related content engine

Quarter 3

- Community support
- Impact dashboard
- Analytics
- Volunteer registration
- Leaderboards for communities (not individuals)

Quarter 4

- AI assistant
- Personalized recommendations
- Advanced search
- Multi-language support
- Public API for partners

Estimated Effort (Single Developer + Part-Time Designer)

Phase	Duration
User Accounts	3-4 weeks
Homepage & Elements	4-5 weeks
Daily Actions	5 weeks

Phase	Duration
User Dashboard	4 weeks
Missions	4 weeks
Community	8 weeks
Impact Engine	5 weeks
AI Features	6 weeks
Polish & Optimization	Ongoing

Total: ~9-12 months for a polished V2 if developed steadily alongside content work.

Final Vision

Three years from now, success should not be measured by "How many visitors came to WIOF?"

Instead, the homepage should proudly display something like:

2.3 million people have taken 18.7 million positive actions through WIOF. Together they have saved an estimated 320 million litres of water, reduced 5,400 tonnes of CO₂ emissions, planted or inspired 480,000 trees, and contributed over 1.2 million hours to personal growth and community well-being.

That is when WIOF stops being a website and becomes a movement.

My Recommendation as Your Technical Architect

Given your current Angular + Firebase codebase, **I would not rewrite anything.**

I would evolve it incrementally:

1. Keep the existing admin dashboard.
2. Add capabilities instead of replacing modules.
3. Reuse existing content everywhere through element tagging.
4. Make "One Small Step" the heart of the platform.
5. Treat every new feature as something that either **helps a person learn, helps them act, or helps measure collective impact**. If a feature doesn't serve one of those goals, it probably doesn't belong in WIOF.

This approach minimizes cost, preserves your existing investment, and creates a platform that can grow from hundreds to millions of users without losing its purpose.
